

Europal – Calculator

Calculator

At Europal, we are looking for a driven, precise, and analytical Calculator with a passion for process optimization.

As part of a small team of Power Players within calculation, you will work on innovative and sustainable solutions and collaborate closely with R&D and Sales.

Your responsibilities will include:

- You are responsible for custom-made quotes and perform price calculations that are both standard and customer-specific.
- You will act as the 'spoc' for the calculation team and be responsible for distributing price calculations among colleagues, as well as following up on them.
- Analyzing and updating parameters within our ERP and calculation tools.
- Optimizing internal processes and contributing to the development of new products.
- Managing and improving technical specifications, in collaboration with R&D and other departments.
- Providing basic product knowledge training for new colleagues, as well as following up on it.
- Monitoring price levels for existing customers and contributing to the analysis of our carbon footprint.
- Questioning and re-evaluating quotes, reflecting on ratios in a quote, and having insight into them.
- Managing Master Data, logic in searching.

You are our new Power Player because?

- With your Bachelor's degree in an analytical field such as Economics or Finance, you immediately have what we are looking for, but you also have at least 3-5 years of experience.
- Speaking French and Dutch is 'peanuts' for you, and basic knowledge of English is also no problem for you.
- Your (former) colleagues describe you as very analytical and very critical; you prefer to question too much rather than too little.
- It doesn't bother you to still perform calculations yourself, but you also have the ambition to take on more and more responsibilities and tasks over time. We are preferably looking for someone who wants to grow and work more analytically, work more on process optimizations, delve into existing quotes,... In short, you combine conceptual and strategic thinking with a hands-on mentality.
- You are convinced of our values and strive for innovation and sustainability, but you are also convinced that your data-driven approach is necessary nowadays.
- MS Office holds no secrets for you, and you have also worked with various ERP packages.

What's in it for you?

- In our dynamic family business, you can make a difference and see the impact. The short lines of communication and flat consultation structure make this a reality.

- 'One team' is the common thread throughout our activities.
- 'Sustainability' is embedded in everything we do, and we are driven to provide the best customer journey with a package of total solutions. We achieve this only with our Power Players (like you soon) on board.
- It sounds cliché, but we offer a competitive salary package after mapping out your wishes and desires.
- We expect flexibility, but conversely, it is only fair that we are too. With us, you can have flexible hours and work from home one day a week.
- We are an innovative company that continues to grow, and our site in Blandain will demonstrate that.
- With some pride, we can promise that we offer 4 hours of training per person per month, and we haven't even mentioned our Europol Academy, which will soon become the jewel of our company.

Do you dare to take on the challenge of making our calculation processes future-proof? We are already looking forward to your vision!
